Education

VIT Bhopal University — Bhopal, India
B.Tech., Computer Science and Engineering, 7.58 — *Jul 2018 - Aug 2022*

Skills

Programming Languages: JavaScript, TypeScript, C++, C#, SQL
Frameworks & Libraries: ExpressJS, .NET Core, Angular, VueJS, Uber H3 Grid, Bootstrap, VueBootstrap, ChartJS
Databases: MongoDB, PostgreSQL, SQL Server
Cloud & DevOps: Docker, Azure Functions, Supabase
Tools & Technologies: Git, Postman
Hard Skills: Object Oriented Programming, Data Structures and Algorithms, Software Design Patterns
Soft Skills: Communication, Presentation, Management

Experience

Software Engineer — Jan 2024 - Present
Nagarro — *Pune, India*

- Engineered a scalable backend REST API using Azure Functions, C#, and .NET Core to support 15,000+ active users for an existing application.
- Enhanced data retrieval queries for the SQL Server database, reducing API response time by 80%, enhancing user experience.
- Successfully launched the feature, guaranteeing seamless functionality to 700+ concurrent users.

Associate Software Engineer — Jan 2023 - Jan 2024
Nagarro — *Pune, India*

- Designed and created frontend web components tailored for an analytical platform, seamlessly integrating client-specific customizations by employing the Bootstrap and VueBootstrap library along with the VueJS framework.
- Achieved an increase in development efficiency by 30% by following efficient software design patterns.
- Optimized CosmosDB queries to reduce the response time by 50%.
- Merged custom data charts utilizing the ChartJS library, enhancing data visualization capabilities for improved insights.
- Programmed backend REST APIs using .NET Core, C# and utilities from the Uber H3 Grid library concerning geospatial data.
- Accelerated website performance by 100% employing algorithms for a seemless real time data calculation and data chart rendering.

Software Engineering Trainee — Oct 2022 - Jan 2023
Nagarro — *Pune, India*

- Developed foundational skills in software engineering and programming, utilizing the .NET Core and Angular along with C# and JavaScript/TypeScript.
- Architected multiple small web application projects as part of assessment, employing the .NET framework for the backend, Angular for the frontend and SQL Server as the database.
- Integrated a range of features, including an admin dashboard for user management, role-based authorization, user authentication.

Projects

Reimbursement Claims App | *TypeScript, NodeJS, ExpressJS, Angular, PostgreSQL, Supabase* — May 2024

- Crafted a user-friendly web application using Node.js runtime and Express.js framework for the backend and Angular for the frontend to facilitate efficient registration of reimbursement claims, enhancing the overall user experience.
- Assimilated diverse features, such as a user management, administrative dashboard, authorization based on roles, authentication of users, and receipt image operations, enhancing the application's versatility.
- Strategically integrated functionalities to streamline user interactions, contributing to a seamless and effective reimbursement process.
